---

Reports actual generation by fuel type for each 15-minute settlement interval, as well as totals by month and year-to-date.

The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing ...

Deployments will average 40 GW annually over the next five years, but the risk posed by attacks on the permitting of solar projects, further treasury guidance, and uncertainty in the solar supply chain could ...

In 2023, net generation of electricity from utility-scale generators in the United States was about 4,178 billion kilowatthours (kWh) (or about 4.18 trillion kWh). EIA estimates that an additional ...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power generation over the next ...

Whether you're a homeowner trying to cut electricity bills or a business exploring sustainable energy options, knowing how much power your solar panels can actually generate is ...

Starting in 2024, NERC is making GADS performance and event reporting mandatory for solar and solar-plus-storage sites with a total capacity of 100 MW or greater. In 2025, the reporting ...

Annual Power Generation = Annual Effective Utilization Hours &#215; Module Installation Capacity. Solar irradiance fluctuates yearly, leading to variations in the annual effective utilization ...

In this article, we will outline both federal and state rules, permitting requirements, interconnection pre-requisites, and why these regulations are important to understand for both developers and ...
