Worried about lithium-ion battery fires? Discover how clean agents & Stat-X protect BESS facilities while meeting NFPA 855 standards.

ESS allows a user to shift where their electricity comes from by drawing power from the batteries during the higher-cost daytime hours then recharging during the lower-cost nighttime hours. This practice is ...

Jensen Hughes can help you address the unique fire safety challenges associated with lithium-ion battery storage and handling and ensure that building and fire code requirements are met.

This document is meant to be used as a customizable template for federal government agencies seeking to procure lithium-ion battery energy storage systems (BESS). Agencies are encouraged to add, ...

The scope of this document covers the fire safety aspects of lithium-ion (Li-ion) batteries and Energy Storage Systems (ESS) in industrial and commercial applications with the primary focus on active fire ...

Lithium-Ion Batteries Lithium-ion batteries have rapidly become an integral part of modern commercial operations. In facilities, batteries are now commonplace in tools, forklifts, backup power systems, and ...

In this article, we will delve into the critical role of clean agent and sprinkler systems in safeguarding against lithium-ion battery fires, drawing insights from industry expertise and technical ...

Apart from Li-ion battery chemistry, there are several potential chemistries that can be used for stationary grid energy storage applications. A discussion on the chemistry and potential risks will be ...

This webpage includes information from first responder and industry guidance as well as background information on battery energy storage systems (challenges & fires), BESS installation ...

Building Energy Storage System Lithium Battery Agent

Learn about the pros and cons of various detection and suppression methodologies for Lithium-ion battery energy storage systems as well as a deep dive of what's the most effective fire ...
