China has significant wind power resources, especially in Inner Mongolia, Xinjiang and other northern and western provinces. (See map below.) Initially, most wind power was located in China's northern ...

In recent years, China has made many new breakthroughs in the development of wind power technology in the fields of high-power wind turbines, wind turbines for ultra-low wind speed, ...

Offshore wind power is a major part of China's clean energy development strategy. The country has a coastline measuring 18,000 kilometers long and is estimated to have up to 750 million kilowatts of offshore exploitable wind power resources. In 2012 China set the goal of 5 GW of installed offshore wind capacity by 2015 and 30 GW by 2020. However, development of offshore wind power did not come as fast as expect...

China's total wind generation capacity is 561 GW, which is more than three times more than the United States who comes in second behind China, and 48% of the world's share of wind ...

On 5 August 2020, a new report revealed by the Global Wind Energy Council stated that China is expected to host more than a fifth of the world's offshore wind turbines, equating to 52 GW, claiming ...

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and...

By the end of 2024, China had exported a total of 5,799 wind turbines with a cumulative capacity of 20.788 million kW to 57 countries across six continents. Official data showed that during ...

London and New York, March 17, 2025 - Wind turbine installations hit a record for a second year in 2024,

China Resources Wind Power s wind turbines

driven by rapid growth in mainland China, according to a new report by research provider ...

China's floating offshore wind prototypes The global deep-sea floating offshore wind is still in the pilot demonstration stage. By the end of Sept. 2024, 5 semi-submersible wind turbines have been ...

China's wind and solar power installed capacity totaled 1,840 GW at the end of 2025, according to data released by the National Energy Administration yesterday.
