Do I need a license to install solar panels?

But, solar licensing requirements by state vary widely. Some states require a dedicated solar contractor license, while others allow solar installations under an electrical or general contractor license. The exact license you need depends on where the work is performed and whether the project includes electrical, structural, or roofing scope.

Which electrical contractor license should I get for solar installations?

The appropriate Electrical Contractor license for solar installations can vary depending on the project's size and complexity. In general, Class B or Class C licenses are often suitable for most residential and small to medium-sized commercial solar installations.

Do solar PV systems need a license?

Because solar PV systems must comply with the National Electrical Code, states use licensing requirements to ensure installers have the technical knowledge to complete safe, code-compliant installations. Failing to meet licensing requirements by state can delay solar permits, void inspections, or expose contractors to fines and liability.

Do solar installers need a license in California?

California has one of the most clearly defined solar licensing frameworks in the U.S. Solar PV installers must hold a C-46 Solar Contractor License, which is specifically designed for solar energy systems. The C-46 license authorizes contractors to:
