The aim of this research is to introduce the conceptual design of an UW-CAES system hybridized with wind turbine and gas turbines for an O& G offshore Platform in Egypt.

On the economic side, interest in hybrid CAES systems coupled with RES is rising due to strong performance indicators such as round-trip efficiencies up to 90% and levelized costs as low as...

The project aims at providing the scientific, technological and policy basis required for the development and implementation of large-scale energy storage in Egypt, enabling increased penetration of ...

As the world transitions to decarbonized energy systems, emerging long-duration energy storage technologies are crucial for supporting the large-scale deployment of renewable energy ...

However, the intermittent nature of most renewable energy sources, wind and solar in particular, poses challenges to grid systems. This thesis focuses on large-scale renewable energy storage systems, primarily CAES systems for ...

This thesis focuses on large-scale renewable energy storage systems, primarily compressed air energy storage (CAES) systems, which are particularly well suited for renewable energy applications.

This review paper covers the technological advancements, design criteria, retrofitting enhancement strategies, and renewable energies' emerging application potentials for improving the ...

Harnessing abundant solar resources, an eco-resort located off the coast of Panama has chosen advanced lead batteries, paired with a battery management system (BMS), to power their island ...

Researchers from Egypt and the UK developed a new floating PV system concept that utilizes compressed air for energy storage. The system has a roundtrip efficiency of 34.1% and an ...
