MUNICH, Germany (Tuesday 6th May 2025): A new report from SolarPower Europe reveals that the world installed a record 597 GW of solar power in 2024 - a 33% surge over 2023.

For instance, at the end of 2023, there were over 150.5 GW of wind power and 137.5 GW of solar photovoltaic (PV) total in the United States. To help put this number in perspective, it's important to ...

Global solar capacity additions are expected to average 540 GW through to 2035, according to the latest report by the IEA. The IEA World Energy Outlook 2025 report predicts that ...

Gigawatts (GW) is a unit of power representing one billion watts, often used to measure the capacity of large-scale power plants, including those harnessing renewable sources like solar, wind, ...

Global solar installations have now surpassed 2.26 TW, with over 47% of capacity added in the past three years, the latest Snapshot of Global PV Markets 2024 report shows. The study ...

China's SDIC subsidiary commissioned a 1 GW photovoltaic plant on the Yalong River in Sichuan, making it the world's third-highest-altitude PV facility at 4,600 m. The project integrates with...

-- The United States installed a record-breaking 50 gigawatts (GW) of new solar capacity in 2024, the largest single year of new capacity added to the grid by any energy technology in over ...

We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory ...

Developers have safe harbored federal tax credits for clean energy projects through 2028, but "very little" capacity is safe-harbored in 2030 and beyond, said a report from PPA ...

Renewable sources of electricity generation are continuing to grow strongly around the world, with global

## GW-level solar energy

capacity expected to more than double by 2030, according to the IEA's latest ...
