Where are Schneider Electric's new data center & microgrid research laboratories located?

Schneider Electric, the leader in the digital transformation of energy management and automation, held a ribbon cutting today to mark the opening of new data center and microgrid research laboratories in the heart of its Global R&D Center in Andover, Mass.

How big is a microgrid lab?

The 1,500-square-foot microgrid laboratory includes four 90kW grid simulators and three 45kW solar simulators. "As AI revolutionizes industries and consumers demand more data for digital services, the need for data centers continues to rapidly expand," said Pankaj Sharma, EVP, data centers and networks at Schneider Electric.

What is Schneider Electric's new microgrid lab?

Schneider Electric designs and develops reliable, efficient power distribution units, tested, validated in Andover for the AI data center market, while the company's new microgrid lab simulates, tests and validates microgrids in real-world situations, accelerating delivery of resilient and efficient power solutions.

What can a microgrid lab test?

The microgrid lab can test various distributed energy resources (DERs), including on-site renewables like solar, backup generators, battery energy storage systems and EV charging, for buildings on campuses or in office parks.

Depending on the complexity, microgrids can have high upfront capital costs. Microgrids are complex systems that require specialized skills to operate and maintain. Microgrids include controls and ...
