The Rotating Solar Panel Using Arduino project aims at charging a 12VDC Battery with the help of Solar Panel mounted on platform which can rotate with the help of a motor.

The document describes a project to build a rotating solar panel that tracks the sun to increase electricity production.

This Sun Tracking Solar Panel circuit rotates the solar panel in the direction of Sun to absorb the energy and we can use it for many applications.

The rotating solar panel system project uses arduino circuitry to get maximum output from solar panel by rotating it as per sun intensity and monitoring voltage

In this video, it is discussed to increase the solar panel power from 30 percent to 80 percent.

While it might seem intimidating to install and set up a solar panel system, understanding the circuit diagrams of a photovoltaic (PV) panel can be incredibly helpful. This article will explain the ...
