-----

In a process in which user equipment performs initial random access to a high - frequency base station, the user equipment receives a first random access response message sent by the high - frequency ...

U.S. patent number 10,763,939 [Application Number 16/081,865] was granted by the patent office on 2020-09-01 for base station, user equipment, and communication signal transmitting and receiving ...

The present disclosure relates to the field of wireless communications, and in particular, to a wireless communications method, user equipment, a base station and a system.

2018-11-19 Uplink switching method, communication device and communication system CN201811379402.1

In a half-duplex communication system, the base station knows the PH of the terminal through the PHR fed back by the terminal. When the PH is high, it means that the terminal can use greater...

This application relates to the field of communication technologies, and in particular, to an antenna system and a base station.

This green site adopts an outdoor corrosion-resistant integrated design, and the MIMO power supply supports multiple energy sources such as solar energy, mains power, and oil engines, ...

System and method for controlling radio base station, and related device Patent number: 10135493

This application provides a base station antenna, to simplify a feeder cabling layout in the base station antenna and reduce a loss of a feed network when normal radiation of the base station ...

The abstract of this patent application describes an antenna and a base station, with the antenna featuring a reflector, an insulation support bracket, and a feed network.
