Should I Leave my inverter on all the time?

Leaving the inverter on all the time means that you can power up your appliances quickly, without having to wait for the inverter to start up from standby mode. This is particularly important for devices that require an immediate power supply, such as medical equipment or communication systems.

Why do you need an inverter always on?

With the inverter always on, you can power your appliances and devices without worrying about interruptions or having to manually turn it on and off. This is particularly useful for applications like RVs or boats, where you may need to power appliances continuously, such as refrigerators or lighting systems.

What happens if the inverter goes out?

The power goes out and your appliances cease to run. You can always turn the inverter back on but that can take time. And most appliances do not like being turned on and off. By leaving the inverter on, the system can automatically switch to it when shore power ceases.

Does an inverter drain a lot of power?

The simple answer is yes. The power the inverter draws will be negligible. It will not impact the overall performance of the inverter. However, the inverter, which is not in use, still drains the power. The power depletion rate will be around 0.20 amps up to 2 amps depending on the unit.
