For most American families, installing solar panels and battery packs can lower electricity costs and manage local and regional power outages affordably, a new Stanford study finds.

Rooftop solar and battery storage can reduce energy costs and provide affordable back-up power for over 60% of US households, but benefits often bypass the high outage risk and...

median rural energy burdens at 5.1%. Low-income households have the highest energy burdens in the New England, Mid-Atlantic, South Atlantic, and East South Central regions, where the median ...

The program aims to reduce energy burdens (the share of household income spent on energy costs), increase resilience against climate change in rural communities, and increase access ...

Energy storage technologies are uniquely positioned to reduce energy system costs and, over the long-term, lower rates for consumers. Read ACP's Fact Sheet to learn more in detail.

Running and maintaining power lines over vast distances is expensive, and these costs are often passed down to consumers. Energy storage, coupled with local renewable energy sources, ...

Rural households have a median energy burden of 4.4%, compared to the national burden of 3.3%. Rural low-income households are even worse off, shouldering a median energy ...

In the present study, an innovative off-grid photovoltaic energy supply system is proposed, which distinguishes the energy quality differences between electrical energy and thermal energy.

Community-led and owned solar and energy storage (solar+storage) can provide critical economic, energy resilience, and environmental benefits to low-income communities.
