Do solar power systems need insurance?

By carefully considering key factors, assessing system value, and exploring various insurance options, stakeholders can effectively mitigate risks associated with solar power systems. Ultimately, securing appropriate insurance coverage is vital for the sustainability and profitability of renewable energy projects.

What types of insurance do solar panels need?

The primary types of insurance include property insurance, liability insurance, and performance insurance. Property insurance covers physical damage to the solar panels and associated equipment due to incidents like theft, vandalism, or natural disasters.

Why is insurance important for photovoltaic plant operations?

Insurance is important to several aspects of photovoltaic (PV) plant operations. Insurance is often a prerequisite for financing, operating permits, interconnection agreements, and leases or as part of a power purchase agreement for an on-site PV system. The history of insurance for PV systems is short compared to other types of assets.

Do PV systems need insurance?

The history of insurance for PV systems is short compared to other types of assets. Property and casualty insurers have been providing coverage for risks for centuries--the first fire insurance policies had their origins in the Great Fire of London in 1666 (Insurance Information Institute 2020b).

Insurance covers unforeseen and sudden physical damage to any solar equipment from your solar project by any cause necessitating repairs and/or replacement. Extra expense insurance and ...

Solar farm property insurance helps protect solar photovoltaic systems against perils that may cause property damage or loss of business income. Hail, wind, fire, flood and earthquake are just a few ...
