On a cargo airplane, a professional loadmaster is necessary to prevent load shifting. If cargo is not adequately secured, it can move during flight, and move the center of gravity outside of its safe ...

Load shifting is a dangerous phenomenon in water, air, and ground transportation where cargo shifts in a cargo vehicle. This causes the vehicle to tilt, which causes even more movement of the cargo, and further tilting, thereby creating a positive feedback loop. If not corrected, this will lead to severe tipping or even capsizing. Such a dangerous occurrence is prevented by active load management, avoiding high sea conditions for ships, and proper container/bulkhead design.

So despite sometimes being used interchangeably, peak shaving and load shifting each have their distinct use cases: load shifting for balancing the grid, and peak shaving for maximizing your grid ...

Load management prevents too many high-current loads from operating at the same time.

We have offices and warehouses in Dakar, China, and Dubai, with full knowledge of local regulations and import and export procedures.
