Can a PV and supercapacitor hybrid system intelligently manage energy?

Sharma et al. developed a PV and supercapacitor hybrid system that can intelligently manage energy, such as putting loads in a dormant state when insufficient energy is stored to conserve power and automatically activating loads when enough energy is collected and stored . Are supercapacitors a viable alternative to battery energy storage?

Supercapacitors, in particular, show promise as a means to balance the demand for power and the fluctuations in charging within solar energy systems. Supercapacitors have been introduced as replacements for battery energy storage in PV systems to overcome the limitations associated with batteries [79, , , , ,].

Why are supercapacitor devices gaining traction in energy systems?

In recent years, supercapacitor devices have gained significant traction in energy systems due to their enormous power density, competing favorably with conventional energy storage solutions.

Why do we need supercapacitors?

Variable energy supply characteristics of solar and wind power generation, with balanced load demands, and differences in time-of-use, stability and quality of such power supply must be equal to, or greater than conventional grid power generation systems for individual or microgrid energy storage. Supercapacitors fulfill this.
