---

Now, the kW-scale photoreactor pilot plant unit has been demonstrated using an integrated photoelectrocatalytic water splitting device with STH efficiency >15% under concentrated ...

Here we present the successful scaling of a thermally integrated photoelectrochemical device--utilizing concentrated solar irradiation-- to a kW-scale pilot plant capable of co-generation of hydrogen and ...

The megawatt-level large-scale photovoltaic integrated machine market exhibits robust growth driven by several factors. The increasing global demand for renewable energy, spurred by ...

This study designed a hybrid multi-energy scheme based on solar and geothermal energy sources to produce sustainable electricity, freshwater, cooling, and hydrogen in an ...

The AI-based hybrid solar energy system integrates multiple integrated modules to enhance the decentralized energy management, energy conversion, and solar tracking.

Here we present a scaled prototype of a solar hydrogen and heat co-generation system utilizing concentrated sunlight operating at substantial hydrogen production rates.

In this study, we demonstrate an integrated photoelectrochemical device which utilizes solar concentration to produce green hydrogen at the kilowatt scale. This pilot-scale demonstrator ...

Solar hydrogen production devices have demonstrated promising performance at the lab scale, but there are few large-scale on-sun demonstrations. Here the authors present a thermally integrated...
