This paper conducts a comprehensive study that aims to provide an alternative to the imported power from Nigeria that supplies Niamey (the capital city of Niger)'s power system.

The high-voltage distribution network in the city of Niamey has 42 branches with a total length of 212,238 km, 94.3% of which are overhead and 5.7% underground.

Power the world with hybrid energy. Recently, SINOSOAR's West Africa branch in Niger has successfully won the bidding for the EPC project of upgrading a low-voltage distribution power line in ...

This paper investigates ways of describing the reliability performance of an electric power grid.

The document discusses reliability of electricity distribution networks in Niamey, Niger. It defines reliability and related concepts, and analyzes reliability indices of the medium voltage distribution ...

Le projet CNE 1157 vise à améliorer significativement l'accès à l'électricité au Niger, aussi bien dans les centres urbains que dans les zones rurales. Il combine des interventions d'infrastructure sur le ...

Using an electric analyzer (CA8220), a study on the behavior of harmonic distortion rate in current generated by linear, nonlinear and mixed appliances was conducted.

The aim of this scientific work is to evaluate the influence of harmonic disturbances on the lifetime of a domestic substation (Tree-Phase) in the city of Niamey.

Cette boucle, visible en colonne verticale du réseau de Niamey, alimente la ville à travers un ensemble d'ouvrages reliant les postes de Gorou Banda, Goudel, Niamey 2 et Niamey Nord.

This work, the first of its kind in Niger, presents a study of the harmonic disturbances in the electricity

Niamey electricity distribution

distribution network of Niamey city, in order to assess the overall harmonic rate of these disturbances.
