Meeting international energy and climate goals requires the global deployment of solar PV to grow on an unprecedented scale. This in turn demands a major additional expansion in manufacturing capacity, ...

This report includes summary data for the photovoltaic industry from annual and monthly respondents. Data include manufacturing, imports, and exports of modules in the United States and its territories.

In the first half of 2024, the United States produced 4.2 GW of PV modules--an increase of 75%, y/y--roughly evenly split between thin-film and crystalline silicon (c-Si) module technology.

In the context of the European Green Deal, analyzing the EU trade in green energy products is crucial for understanding geopolitical dependencies, assessing energy security, and supporting domestic ...

The Middle East and North Africa can exploit solar energy resources and export them to Europe and South Asia for a sustainable future of the world. A high voltage direct current (HVDC) ...

In 2024, China, the EU, and the United States continued to represent more than 80% of annual PV installations. However, large growth occurred in other markets, particularly India (+92%) ...

From these organisations, this report contains in-depth features on the 26 countries that added at least 1 GW of solar in 2022. There are nine more GW-scale solar markets in 2022, compared to the 17 in ...

Can European businesses achieve a competitive position in the global solar-PV supply chain and strengthen Europe's energy transition and resilience? It's challenging but a potential ...

Thus, in Europe, Japan, and the United States, there is a clear imbalance between the supply and demand of solar PV products. This imbalance results in a significant dependence towards foreign ...

Photovoltaic energy storage exports to Europe and the United States

In line with the mission of ESMC, an annual study has been conducted in recent years to provide an overview of the central PV cell and module trade flows in and out of Europe.
