Electricity generation from solar, measured in terawatt-hours.

The NREL PVDAQ is a large-scale time-series database containing system metadata and performance data from a variety of experimental PV sites and commercial public PV sites.

This data packet contains supply curves, hourly generation profiles, and a composite siting exclusion TIFF for utility-scale PV across the contiguous United States....

It includes corresponding PV facility information, including panel type, site type, and initial year of operation.

Inside, you'll see a central table listing each grid's available photovoltaic (PV) datasets. Each grid has its own Markdown file containing detailed information on data sources, data types, and access/usage ...

The NREL PVDAQ is a large-scale time-series database ...

To address these challenges, we present PV-GPT, an agent framework that leverages large language models (LLMs) and the Brick ontology to enable natural language querying of ...

Solar photovoltaic (PV) power generation, known for its affordability and environmental benefits, is a key component of the global energy supply. However, the lack of comprehensive, timely,...

The Solar Power Generation Data dataset provides synchronized inverter-level AC/DC power and yield measurements together with plant-level weather sensor observations from two grid ...

Discover the top solar energy data for 2026. Find reliable and up-to-date solar energy datasets and databases, including solar farm and solar power datasets. Explore on Datarade.ai for the best providers.

Photovoltaic panel power generation data query

Returns various types of solar data for US locations. The service currently returns data for average Direct Normal Irradiance, average Global Horizontal Irradiance, and average Tilt at Latitude.
