How much power does a portable charger use?

Some more powerful portable chargers also have 100-watt AC outputs, allowing you to insert a standard two- or three-pronged plug. For speedy laptop charging, you likely want a portable charger capable of outputting 100 watts of power or more, while around 18 watts or more could provide fast phone charging.

What makes a good portable charger?

Capacity: Then there's the other size: each portable charger has its own mAh rating for its maximum internal electrical charge. The bigger the mAh rating, the bigger the battery inside and the more it can recharge.

Should you buy a power bank or a portable charger?

The best power banks are always handy. Our gadgets have a Murphy's law-like ability to run out of power at the least convenient moment: as you step on the bus, right in the middle of an important meeting, or just as you get comfortable on the couch and press Play. But with a portable charger, you can keep using your devices.

How do you choose a portable charger?

Battery capacity is one of the most important factors when choosing a portable charger, says CR testing engineer Bernie Deitrick. These backup batteries typically have capacities between 5,000 mAh (milliamp-hours) on the low side and 30,000 mAh (or more) on the high end. To choose, consider what you need to charge.
