Is a hybrid inverter better?

A hybrid inverter is more flexible than a conventional inverter, but that doesn't mean it's better. If you're planning on keeping your solar panels tied to the grid and don't have plans for adding a battery, a hybrid inverter might not be ideal and would likely cost more.

Does a hybrid inverter pay off in the long run?

Even with higher initial costs, a hybrid inverter can pay off in the long run by giving you a solar inverter that maximizes the operations of your solar system. A hybrid inverter can reduce your reliance on the grid, lower your carbon footprint, enjoy advanced monitoring tools, and enhance your power generation.

Do inverter/Chargers have AC inputs?

Inverter/Chargers have ac inputs for generators. BUT! They do not parallel inverter output with the generator. They are either in inverter mode or charger mode. When the generator is not operating, the inverter will convert the dc power from the battery to provide ac power to the loads. (Inverter Mode)

Will a hybrid inverter shut off power during a blackout?

If your system uses a traditional solar grid-tied inverter, it will automatically shut off power from your system during a blackout for safety purposes. A hybrid inverter paired with a solar battery storage system is a great solution for such a scenario.

The ac bus interactive inverter is an inverter/charger that can parallel battery output with generator operation and another ac source (e.g. PV array via PV inverter) to supply energy to ac loads.
