When a mobile device is close to a small-cell base station, the power needed to transmit the signal is much lower compared to the power needed to transmit a signal from a cell tower far away, thus ...

Power consumption in base station can be minimized by using effective sleep and wake-up/setup operations with a tolerable delay. In this research work, the service process of the BS is considered ...

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve communication ...

The interoperability testing time for base stations of different vendors was reduced by more than 30%, assuming the commercial environment of overseas telecommunications carriers ...

The construction of the information management concept of inspection report is realized, and a set of solutions that can be implemented on the ground is provided to improve the efficiency of base station ...

In this paper, we take initial steps towards a performance exposure system at the base station using a data-driven approach for predicting performance violations in terms of RTT, as ...

Key for connecting base stations into a network, this system ensures smooth communication. It becomes a top priority during power outages to maintain data flow. Outdoor base ...

The present document specifies the applicable requirements, procedures, test conditions, performance assessment and performance criteria for NR base stations and associated ancillary equipment in the ...

In this paper, the experimental verification scheme based on 5G is studied in power system.

We formulate the inspection routing problem as a prioritized traveling salesman problem (PTSP)

Regarding the delay inspection of 5G base station power connection project

encompassing two categories of base stations. Priority is assigned to stations generating ...
