How do I install solar panels?

Ground-mounted panels can be installed anywhere with good sun exposure and enough open space. A minimum of 350 square feet is usually required. Installing solar panels requires the following steps: Plan the solar energy system based on the home's size, location and energy needs. Measure, cut and assemble the support structure for the solar array.

How do you install solar panels on a flat roof?

For Flat Roofs - Installers use either ballasts or concrete blocks to rack the solar panels. Once you secure the structures into place properly, you can move on to installing the racking rails. When installation day begins, start with ensuring the solar racking system conforms to your design and drawing. 2. Mounting the Solar Panels

How do you install solar panels on a racking system?

Once the racking has been built, installing solar panels is fairly straightforward by comparison. Use two end clamps to install the first panel on the rails. Then, use grounding mid clamps for each consecutive panel - mid clamps bound the solar panels and rails together, into one continuous system.
