-----

In a remarkable development for the global energy landscape, clean energy sources such as solar and wind power provided over 40% of the world's electricity in 2024. This surge can be ...

Renewables and nuclear provided 40.9% of the world's power generation in 2024, passing the 40% mark for the first time since the 1940s, according to a new global energy think tank Ember...

Clean power now makes up over 40% of global power generation, proving that the momentum is unstoppable. Now, governments must step up, cut red tape, and unlock finance to ...

Electricity generation from solar, measured in terawatt-hours.

As we surpass 40% of electricity from clean power sources, solar panels energy continues to play a pivotal role in this transformation, with substantial contributions from wind, hydro, and nuclear power ...

China and India, the world's 1st and 3rd largest greenhouse gas emitters, are making major strides in their clean energy efforts. China alone accounted for over half of all new solar power added globally ...

Clean power surpassed 40% of global electricity generation in 2024. Record renewables growth led by solar helped push clean power past 40% of global electricity in 2024, according to a ...

However, wind and solar power are now right behind these two zero-emissions pioneers. Wind power provided 8% of global electricity, and solar power provided 7% of global electricity.

Clean energy's surge: Renewables, led by solar and wind, now account for over 40% of global electricity generation. Key findings from the Ember report.

The 2025 edition of the "Global Electricity Review" report released by the international energy and environment think - tank Ember on April 8 revealed that in 2024, the global share of ...
