-----

Sumitomo Mitsui Construction's floating solar power generation facilities, shown here installed in Tokyo Bay, can adjust easily to rising and falling water levels. By comparing and verifying ...

In May 2021, the Japanese Trade Ministry said that Japan may require up to 370 GW of solar capacity by 2050 to reach the goal of cutting carbon emissions to zero.

The power generation simulations for the 53 locations in Tokyo (Table 1: orientation south, Table 2: orientation southeast/southwest, and Table 3: orientation east/west) can be downloaded here.

This article covers considerations on Tokyo's new solar panel installation mandate, current energy generation challenges and examples from Germany's initiatives.

In contrast with other renewables, solar generation has experienced rapid growth in Japan. In 2024, solar contributed approximately 97 TWh, representing almost 10% of the electricity ...

Ever since the nuclear disaster in Japan in March 2011, the solar energy scene in that country has evolved rapidly. Today, the solar electricity output accounts for almost 10% of the total energy ...

Businesses will continue to develop products and services that take full advantage of the benefits of solar power generation. Houses equipped with solar power generation equipment will ...

The Japanese government is seeking to expand solar power by enacting subsidies and a feed-in tariff (FIT). In December 2008, the Ministry of Economy, Trade and Industry announced a goal of 70% of new homes having solar power installed, and would be spending \$145 million in the first quarter of 2009 to encourage home solar power. The government enacted a feed-in tariff in November 2009 that requires utilities to purchase excess solar power sent to the grid by homes and businesses and pay twice the st...
