Last year, researchers at Tallinn University of Technology made a semi-transparent window glass/solar cell that simultaneously generates electricity and regulates the building's indoor ...

In this study a solar collector field in Tallinn is modelled and possible location is proposed and different scenarios using produced solar energy are investigated, such as using solar energy to ...

In the Tallinn University of Technology, or Taltech for short, a group of scientists are developing the first prototype of a solar window glass that could convert sunlight into electricity for ...

Tallinn's rooftops hold immense potential to transform the city into a renewable energy powerhouse. With the ability to generate over 8.51 TWh annually, solar energy could not only meet ...

This transparent solar technology seamlessly integrates into buildings while generating clean electricity - a perfect fit for Estonia's focus on sustainability and smart urban development.

It combines PV power generation technology with curtain wall technology, which uses special resin materials to insert solar cells between glass materials and convert solar energy into electricity ...

The company sells its roofs to 10 countries from its state-of-the-art solar roof factory near Tallinn, Estonia, and has delivered a 300% annual revenue growth over the last three years.

Estonian startup Solarstone has developed two solar tiles with an efficiency of up to 19.5% and an operating temperature coefficient of -0.41% per C.

This article explores the strengths of Estonian solar technology, market trends, and actionable insights for businesses seeking reliable solar energy solutions.

Our unique solar roof technology was born out of personal need. Andri Jagomgi, the founder of

Tallinn solar Glass R

Roofit.Solar, had been actively researching and testing solar panels at Tallinn University of ...
