Here is the list of world's leading renewable energy generating countries in the world. 1. China is a global leader in wind energy generation. The country had a significant installed capacity ...

Renewables 2025 Global Status Report Collection. A comprehensive annual overview of the state of renewable energy.

Wind power is used on a commercial basis in more than half of all the ...

The average for 2022 based on 189 countries was 11.16 billion kilowatthours. The highest value was in China: 762.67 billion kilowatthours and the lowest value was in Afghanistan: 0 billion kilowatthours. ...

This visual shows the top 15 countries by total installed wind turbine capacity, based on data from the Energy Institute's 2025 Statistical Review of World Energy report.

This is solidified by wind's long-standing position as the leading non-hydro renewable technology, generating over 2,100TWh in 2022 -- more than all other forms combined. Ranked by ...

These countries demonstrate that the world as a whole can achieve a 40-50% share of wind power in total electricity generation, as outlined by the WWEA in a long-term scenario.

This dashboard ranks countries/areas to their renewable energy power capacity or electricity generation. The data can be further refined based on region, technology or year of interest.

From China's mega-projects to Germany's community wind cooperatives, the 2025 rankings reveal a fragmented but determined global effort. One thing's clear: countries combining ...

Wind power is used on a commercial basis in more than half of all the countries of the world. [3] Denmark

Top 10 wind power annual power generation rankings

produced 58% of its electricity from wind in 2023, a larger share than any other country.

Also includes information on each country's actual yearly production of wind-generated electricity, as well as the amount of electricity generated in offshore wind farms as compared on onshore farms.
