In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

In this blog, we'll cover what is driving the unprecedented growth of the energy storage sector, address challenges the industry needs to navigate, and show how energy storage unlocks ...

A strong U.S. solar and storage manufacturing base can reduce supply chain uncertainty, drive clean energy deployment, and strengthen America's energy security.

-- The Solar Energy Industries Association (SEIA) is unveiling a vision for the future of energy storage in the United States, setting an ambitious target to deploy 10 million distributed ...

Energy storage systems, mostly large batteries, are important because they help store solar and wind power for use when the sun isn't shining or the wind isn't blowing. In 2025, over 31 ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key markets like California and Puerto Rico, and continued ITC access through ...

Solar and storage dominate U.S. power growth in 2025, cutting costs, boosting jobs, and securing America's clean energy future.

U.S. solar and energy storage are poised for significant growth in 2025. Explore the trends driving this transformation today!
