How do I ensure a mobile base station installation is EME compliant?

Compliance relies on the successful design of a mobile base station installation. The location of neighbouring areas of interest must be reviewed to ensure EME compliance can be achieved with proposed construction drawings. Environmental Management Reports (EMR's) are required for all mobile base station installations.

Do you need RF EME modelling for a mobile base station?

The provision of compliance documents, such as EMEG's, SCR's and SCC's all require RF EME modelling of the mobile base station (MBS) installation. As part of this modelling process, RF EME signage is reviewed along with personnel access points to ensure compliance for the entire site.

Do mobile phone base stations comply with EME limits?

Mobile phone base stations must comply with safe electromagnetic energy (EME) limits and Telcos demonstrate compliance by providing an Environmental EME Report showing the level of RF EME from the base station.

What legislation regulates telecommunications networks and services?

The Commonwealth government has a number of Acts, codes and standards that regulate the provision of telecommunications networks and services. These include the Telecommunications Act 1997, the Radiocommunications Act 1992, the Telecommunications (Consumer Protection and Service Standards) Act 1997 and related industry codes.

Our Telecommunications Engineering Standards Library contains current, authorised and controlled engineering standards and specifications.

In the early days of mobile telephony, base stations were usually tall structures servicing large areas (cells). Legislation granted carriers immunity from council and state government regulations when ...

This is a compilation of the Telecommunications (Interception and Access) (Emergency Service Facilities--Victoria) Instrument 2020 that shows the text of the law as amended and in force ...

Mobile phone base stations must comply with safe electromagnetic energy (EME) limits and Telcos
