---

The EU installed a record 27.1 GWh of new battery storage capacity in 2025, driven by utility-scale projects that accounted for over half of new additions as the bloc races to build the ...

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage later this month, according to new analysis launched on Wednesday by LCP ...

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total ...

The EU installed a record-breaking 27.1 GWh of new battery energy storage system (BESS) capacity in 2025, with Germany and Italy topping the chart again, while Bulgaria emerged as ...

In the years ahead, storage will play a decisive role in making Europe's energy system more resilient, flexible, and ultimately more affordable. The question is no longer whether batteries ...

We explore how battery storage is reshaping the grid, driving innovation, and helping Europe build a clean, flexible energy system.

But beyond the numbers, the big question remains whether Europe can accelerate fast enough to ensure a resilient, competitive, and above all, decarbonised power system. The clock on ...

A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, LCP Delta has said.

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the ...

# Western Europe New Energy Energy Storage Battery System

Let's face it: Europe's energy storage game is getting hotter than a Tesla battery during peak discharge. With operated battery storage capacity now exceeding 20GW [1], the continent is rewriting the rules ...
