REFLECTIVE definition: that reflects; reflecting. See examples of reflective used in a sentence.

To do this, it examines 3 quantities of reflected light, its spectrum, intensity, and polarization. The results of the study provide a comprehensive picture of the reflective effect of an ...

Solar panel reflectivity, often called "reflectance," measures the extent to which a solar panel reflects incident light rather than absorbing it. It's a critical factor in determining the efficiency of a PV module.

Reflective people tend to be a bit philosophical and intellectual. But almost everyone has reflective moods; gazing into a fireplace or a campfire seems to do it to almost everyone.

WordReference Random House Learner's Dictionary of American English © 2025 reoflective /rɪ'flektɪv/ adj. thinking or tending to think about something in a careful way: He fell into a reflective mood. ...

PV arrays typically do not cause glint, but glare can be a concern. Glare intensity from PV arrays is generally low compared to that of buildings or snow and ice because the panels are designed to ...

Modern solar cells use anti-reflective coatings (ARCs) to trap photons, boosting efficiency while minimizing glare. In fact, most panels reflect only 2-10% of incoming light--less than your average ...

In practical terms, lighter-colored surfaces (e.g., snow, sand, or white roofing) exhibit high albedo and reflect more solar energy, while darker surfaces (e.g., dark soil) have low albedo and ...

Solar PV modules are coated with a reflective material to help capture more of the sun's energy. Installing them on a rooftop or other elevated location can reduce glare and improve solar ...

A reflective individual often engages in introspection, taking the time to analyze their own actions,

What are the reflective levels of photovoltaic panels

motivations, and beliefs. They may seek to gain insight, understand themselves better, or make ...

Soiling of photovoltaic modules and the reflection of incident light from the solar panel glass reduces the efficiency and performance of solar panels; therefore, the glass ...

If something is reflective of a particular situation or attitude, it is typical of that situation or attitude, or is a consequence of it.
